Warren C.N., Aronstam R.S., Sharma S.V.;

"cDNA clones of human proteins involved in signal transduction

"cDNA clones of human proteins involved in signal transduction

"equenced by the Guthrie cDNA resource center (www.cdna.org).";

Submitted (ARR-2003) to the EMBL/GenBank/DDBJ databasses.

-!- FUNCTION: Orphan receptor.

-!- FUNCTION: Orphan receptor.

-!- SUBCELLUIAR LOCATION: Integral membrane protein (By similarity).

-!- SIBSUE SPECIFICITY: Expressed in all adult and fetal tissues

examined, including pancreatic islets and skeletal muscle, with

relatively higher levels in adult lung, small intestine, colon and

Submitted (MAR-2004) to the EMBL/GenBank/DDBJ databases.

I- SIMILARITY: Belongs to the G-protein coupled receptor I family.

Shambi EMSCO000017862; Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION. Orphan receptor.

-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NUCLECTIDE SEQUENCE.

Inoue S., Yoshida S., Urakawa I., Mizutani S., Okazaki H.;
Inoue S., Yoshida S., Urakawa I., Mizutani S., Okazaki H.;
Submitted G., Protein coupled receptor.";
Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.
--- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
--- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
EMBL, AB041940; BAD835941; -; mRNA.

Genoscope, Whitehead Institute Centre for Genome Research,
Genoscope, Whitehead Institute Centre for Genome Research,
Submitted (FBB-2004) to the EMBL/GenBank/DDBJ databases.
I- CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DBBJ whole genome shotgun (WGS) entry which is
preliminary data.
I- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
                                                                                                                                                                                   Gaps

WPI; 2002-706980/76. N-PSDB; ABS73401 New human G-protein coupled receptor (GPCR), useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR.

Example 2; Page 189-190; 201pp; English.

The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCRs), mutant (non-endogenous) versions of the GPCRs, and the polynuclectide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension,

The present sequence is that of the human gene encoding G protein coupled receptor, GPR35 as deduced from a composite CDNA (see AAA27485). The sequence of GPR35 as deduced from a composite CDNA (see AAA27485). The sequence of GPR35 is similar to that of a putative purinoceptor P279 (34.1% identity) suggesting that AFP or other nuclectide is its ligand. GPR35 mRNA was detected in all adult and foctal tissues examined with relatively higher levels in adult lung, small intestine, colon and stomach. In these tissues, there are 2 major transcripts of 2.4 and 4.4 cm of the GRS5 gene is located in a 49,136 bp region (see AAA2745) within the NIDDMI region of human chromosome 2. This region also includes the CAPN10 gene, which encodes a novel calpain-like cysteine protease, designated calpain 10. Mutations in the CAPN10 gene are responsible for screening for the calpain in a calpain encoding nucleic acid. Methods are also claimed for inclentifying modulators of calpain activity, and using these color insulin secretory response or insulin mediated glucose transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        endogenous human G-protein coupled receptors (GPCRs), mutant (non-endogenous) versions of the GPCRs, and the polynucleotide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension, reflux disease, depression, migraine, schizophrenia, ulcers, psychotic disorders, astham, bronchospasm, anaesthebesia, myocardial infarction (MI) stroke, glaucoma, prostatic hyperplasia, epilepsy, prostate cancer, anxiety, prostatic hypertensy, thintis, and angina. The present

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino cardida. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in cantibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific cantibody against a particular GPCR, and in the production of specific cantibody against a particular GPCR, and in the production of specific cantibodies. The peptides and antibodies are also useful for detecting the consense or absence of corresponding GPCRe. The antigonic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for creating immune-related disease, immunological-related call proliferative disease, or autoimmune disease, immunological-related call proliferative creaneration-related disease, immunological-related call proliferative disease, or autoimmune disease, e.g. AIDS, Alzheimer's disease, catherosis, bacterial, fungal, protozoan or viral infections. Contentation, allergies, Crohm's disease, diabetes, graft versus host disease, Parkinson's disease, multiple solences's pain, pseriesion, contentation, schizophrenia, dementia, mental retardation, memory contentation renal disorders in which GPCRs are involved. The antibodies may be content in immunoassays and immunodiagnosis. ABZ4521 to antibodies may be contentation in memory and immunoassays and immunodiagnosis. ABZ4552 to antibodies may be contentation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or

The proteins and genes are useful for diagnosis, treatment and prevention of heart failure.

Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.

Claim 151; SEQ ID NO 496; 542pp; English

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the inventing preventing or diagnosing diseases of the invention; methods of screening for associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; am ouse comprising a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgene or in an endogenous GPCR gene; cells derived a mutation in a different GPCR polymucleotides of the invention. The mutation in the discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acid. Alzheimer's disease, comprising a GPCR nucleic acid. The GPCR nucleic acid. Alzheimer's disease, be used in the disquancis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders of the color or intestine of syndrome); cardioral disorders (e.g., angina, cardiac arrhythmia or syndrome); cardioral disorders (e.g., angina, cardiac arrhythmia or syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or syndrome); pone and joint disorders (e.g., angina, cardiac arrhythmia or syndrome); pone and joint disorders (e.g., angina, cardiac arrhythmia or aneemia or leukaemia); immunu disorders (e.g., aucidemina disorders (e.g

(GANY-) GANYMED PHARM AG

Koslowski M; Sahin U, Tuereci O,

WPI; 2004-421820/40. N-PSDB; ADO78086. Composition containing inhibitor of expression or activity of specific tumor-associated antigens, useful for treating cancers, also related compositions for diagnosis and monitoring.

Claim 72; SEQ ID NO 9; 124pp; German

agent that inhibits the expression or activity of a tumour-associated antigen (TAG) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAG, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAG, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and sequence of a human GPR35. The invention relates to pharmaceutical compositions that comprise an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an antibody immunospecifically binds to p-cadherin or its fragment. The antibody is useful in preparing a composition for treating or preventing a cancer-associated disorder. The present sequence represents the amno acid sequence of a protein upregulated in human colon cancer cells.

The present sequence is human receptor-associated protein (HRAP) from Incyte clone 3083742 obtained from OVARTUN01 cDNA library. This sequence is expressed in haematopoietic/famune, gastrointestinal and reproductive tissues. HRAP has cytostatic, immunomodulatory, antianflammatory, cardiant, antiarteriosclerotic, hepatotropic, antiantentitic, antiateriosclerotic, hepatotropic, antianaemic, antiasthmatic, antiateriosclerotic, neuroprotective activities. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with HRAP expression, especially cell proliferative, autoimmunefinflammatory, reproductive, cardiovascular and autoimmunefinflammatory, reproductive, cardiovascular and gastrointestinal disorders (e.g. atherosclerosis, cirrhosis, leukaemia, cancer, AIDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and irritable bowel syndrome)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 NIAVADICILCTIPFVLHSLRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a peptide acting as agonist, antegonist or inverse agonist on a target receptor. Specifically, it comprises transformation of endocrine cell lines originating from mammalian hypothalamus and pancreatic islets, culturing the transformants and contacting with cells expressing the trarget receptor. The identification of those calls with a response reaction can be used for selecting a transformant cell line with the appropriate target activity that is expressing the novel transformed DNA. Accordingly, the present invention describes novel cell lines that are applicable in expression cloning systems of bloactive peptide precursor genes, and in screening GPCR ligands for use as drugs including agonists antagonists and inverse agonists i.e. activators and inhibitors. Such cell lines can provide a highly sensitive and convenient GPCR ligand assay system. This polypeptide sequence is the human GPCR GPR35 D113A mutein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for obtaining a DNA that encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Endocrine cell lines originated from mammalian hypothalamus and pancreatic islet, applicable in expression cloning systems of bloactive peptide precursor genes, and in screening G protein-coupled receptor ligands.
